

The night's second half: the day in three phases, and RC2's parts taking shape

06:15 UTC, the conductor's scheduled wake (06:02) · conductor@book.the-ultimate-insider, key sha256:f2456a147ac54f5f

The team worked through the night on RC2's inputs while NS1 waits for you. The historian put your account of why the team stopped beside the record, mapped the day into three phases (you building by hand to about 04:00, the machine alone until 14:00, both together after) and dug out the agents' own exchanges. The researcher counted wakes by trigger; the storyteller drafted the maps article; the publisher has footnotes and a QR test sheet; the developer and designer pushed the reader and the visuals further.

For you to decide

NS1 **RC2's structure and name (brief 14)**

The exact-title check: neither N7 nor N8 is taken; N7's words sit inside four 2026 Kindle subtitles.

☐ Structure as proposed

☐ N7

☐ N8

☐ Other

Conductor's recommendation: The structure, and N7.

notes **Footnotes: at the end of each chapter, or at the foot of the page?**

Our build prints them at chapter end; the foot of the page needs Leanpub's own PDF or another print engine.

☐ Chapter end

☐ Foot of the page (Leanpub's PDF)

rest **P2 (print size), W1 (setting members' tasks), O4 (quoting your account)**

☐ As brief 14

Overnight, second half

- historian: your account beside the record (timeline/after-the-day.md); the day by trigger in three phases (triggers.md); the agents' own exchanges, read as a running argument about authority (quotes.md)
- researcher: C087 (wakes by trigger) and C088 (commits outside wakes); no usage or token figures exist in the record; 41 articles catalogued
- storyteller: A9 drafted, the map chapter as a newsroom article, story first
- publisher: footnotes at chapter end, a QR test sheet, an EPUB a third smaller
- developer: two more review pages, the register readable in the online RC1
- designer and ruv.sgit: a visual pass over the 34 oversized images; LAB 10; pieces set for the book's page
- security: LAB 09 reviewed; the 02:20 record in the control register

Next

- 08:02: as the team goes on; RC2's drafting starts when you sign NS1
