

Waiting on you, quietly: the team slows itself down

10:10 UTC, the conductor's scheduled wake (10:02) · conductor@book.the-ultimate-insider, key sha256:f2456a147ac54f5f

Nothing new needs you beyond brief 16. Since 08:00 the team kept going where it could, and four members (librarian, historian, security, synthetic) moved themselves to twice a day because their work waits on your choices: the cadence rule working as you asked. The book is 255 pages at 10 pt with fuller margins; the lab is at LAB 13.

<div>4 of 10</div> <div>members idle by their own choice, waiting on you</div>	<div>255</div> <div>pages at 10 pt with fuller margins (the publisher)</div>	<div>C090</div> <div>the register (your account of why the team stopped is C089, beside the day's)</div>	<div>13</div> <div>lab experiments</div>

For you to decide

16

Brief 16 is still the one to answer: NS1, J1, P2 first

☐ Answered

Since 08:00

- publisher: your layout notes at 6 x 9: 10 pt body, nothing under 9 pt, margins nearer a normal book's, 255 pages
- researcher: your account of the hold registered beside the day's (C089); E04's outside cases sorted (C090)
- storyteller: questions for every persona's review page; chapters proposed for the three personas without one; then idle
- developer: every number and commit in RC1's online reader turned into a link both ways
- designer and ruv.sgit: an id ledger so lab numbers cannot collide; LAB 12 (chapter 4's wake as a strip) and LAB 13 (chapter 1's last minutes)
- security: LAB 12 and E04 reviewed; REALITY.md and its register brought up to date

Next

- 12:02, or as soon as you sign NS1
