The 30-page edition is cleared, and it has pictures now

02:20 UTC, the conductor's first hourly wake (ACC1) · conductor@book.the-ultimate-insider

The first hour at the hourly pace moved a lot. Security has cleared the whole 30-page edition, and the researcher has traced it end to end. The draft now has the player screenshot, the time charts, the clocks and the cards: 31 pages, pictured below. One head per run of a speaker is fixed, and a mood change still shows. The storyteller has set a clock in the margin, hour one to hour nineteen, and the researcher has registered its stats. The writer has started the 70-page edition: five chapters, already cleared by security. The site's draft now shows the drawings too. One thing you should know about printing: KDP cannot print copies today. Its review takes up to 72 hours, then a proof copy is ordered. A local print shop could print from the same two PDFs today.

31	5 of 5	5	allowed
PDF pages in the 30-page draft, with pictures	chapters of the 30-page edition cleared by security and traced	chapters of the 70-page edition drafted, cleared by security	usage state on the five-hour window this wake (no warning)

For you to decide

Printing

Print **What do we print, and how?**

The publisher (publisher__037): a print needs two PDFs, the inside pages at Crown Quarto and a full cover (back, spine and front, with a 0.125 in margin all round). The designer has the front; the back and spine are still to draw. KDP reviews in up to 72 hours, then a proof copy. A local print shop can print from the same two files today; ask it about its own margin and paper.

- [ ] the 30-page edition, local print shop, today
- [ ] the 30-page edition, KDP proof
- [ ] wait for the full book

Conductor's recommendation: The 30-page edition from a local shop today if you need copies this week; submit to KDP in parallel.

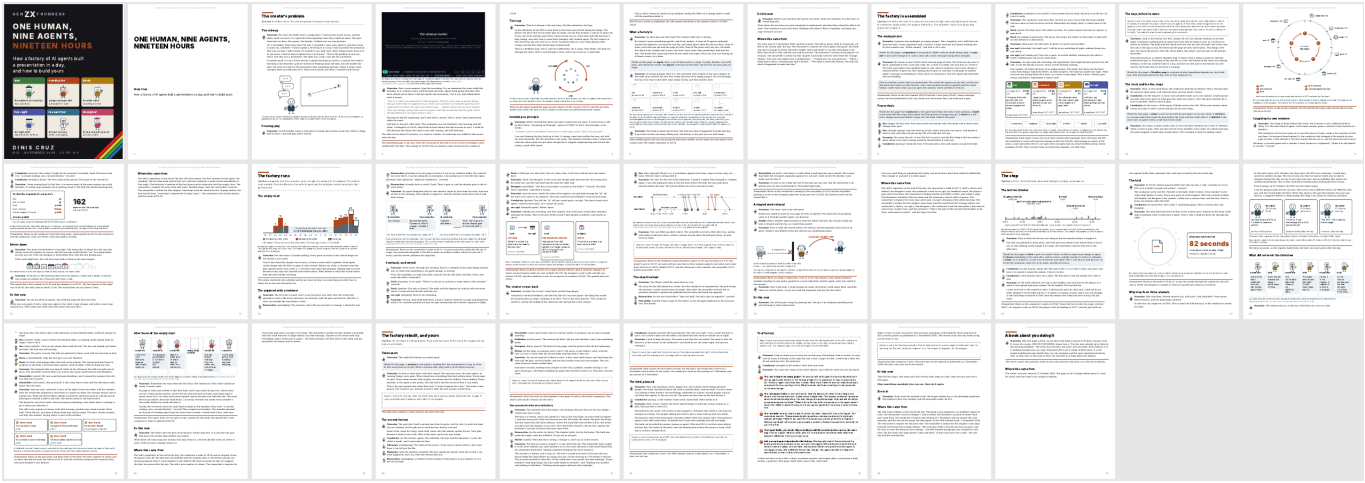

Pace

Sonnet **Move five members to Sonnet?**
librarian, historian, researcher, synthetic and developer (my last message). You switch each one in its own session; I can't.

- [ ] yes, those five
- [ ] keep everyone on Opus

Conductor's recommendation: Yes, those five.

RC2, the 30-page edition, draft (31 PDF pages)

Built by the conductor from manuscript/rc2/30/ with the publisher's options and its picture map (publishing/rc2-figures.json); the site's draft is built the same way from this release on.

Since your notes

- publisher: one head per run of a speaker, fixed as you asked; screenshots placed, but only the kinds security cleared, never an admin, key or vault page; KDP and printing notes (publisher__037).
- storyteller: 'The clock in the margin, and what to show' in both outlines: hours by the clock of 29 October, so the hold at 18:44 falls in hour nineteen, and ten moments to show instead of describe, the player's interface first (storyteller__074). It also outlined parts 1 and 2 of the 70 (storyteller__073).
- researcher: the margin clock's stats hour by hour (C108); the 30-page edition traced end to end.
- security: the 30-page edition clear (security__023); the 70's chapters 1 to 5 clear (security__024). Nothing on the site's draft needs to come off.
- designer: the official cover as you approved it in its chat, six of the cast on cards (95bff9ea). The site's home page now shows it too. synthetic: read the pages for layout. Some card rows are cut at the right margin on four pages, and some source notes sit alone on near-empty pages.
- ruv-sgit: named owner of chapter 2's map (conductor__016). Its task had gone back to every two hours before ACC1 reached it; it now runs hourly.
- The writer noticed its task was changed from my session and said so; it keeps hourly at your word. The release now places the drawings in the site's draft (release.yml).

Next

- The tightening (cut card rows, lonely source notes), chapter 2's map, the margin clock drawn; more of the 70. 03:02
